Harvest LB-1
Product Information
Version: 1 PI GLOB EN 04-06-2018

Description
Harvest LB-1 is a freeze dried concentrated pure culture of Lactobacillus plantarum. The culture has been selected to ensure a fast and safe acidification of cereal bases, vegetable juices and other sugar beverage bases. Lactobacillus plantarum is a facultative homofermentative lactid acid bacteria, which means the culture will produce only lactic acid from hexose sugars like glucose and fructose. The culture can also consume sucrose and maltose.

During acidification, the culture produces fruity aroma compounds (esters and terpenes, depending on the beverage base), which result in a flavorful end product.

The culture is ready for inoculation directly in all beverage bases without previous reactivation.

Culture composition:
Lactobacillus plantarum.

Material No: 718316  Color: Off-white to slightly brown
Size 10X10 HL  Format: FD-DVS
Type Pouch(es) in box  Form: Freezedried

Storage
-18 °C / 0 °F

Transport condition
The product can be shipped and handled at ambient temperature.

Shelf life
When stored according to recommendation the product has a shelf life of 24 months.

Dosage
It is recommended to use one pouch in 10 hl (264 US gallons).

Application
This culture has been selected for its overall outstanding performance and capability to perform a fast and safe acidification in:
- Cereal beverage bases (like wort) for kettle souring: <16h acidification time
- Vegetable juices (like beetroot, carrot, tomato, ...) <24h acidification time
- Other beverage bases: as long as there is glucose, fructose, sucrose or maltose available, the culture will perform acidification. However, care needs to be taken that enough other nutrients (like nitrogen) are present in the beverage base to be fermented.

If needed, Bactiv-Aid 2.0 can be added as an extra nutrient source.
Please contact our Application reponsibles for further information.

Other features of the culture:
- Direct inoculation into all mentioned beverage bases
- High number of active cells which ensure a quick acidification start
- High level of microbiological purity
- Does not produce biogenic amines
- Production of fruity aroma compounds

**Directions for use**
This freeze-dried culture should be used for direct inoculation into beverage base. No rehydration or reactivation is required.

1. Remove the pouch from the freezer 15 min. prior to use and place it at room temperature. Make sure that the dosage complies with the amount of beverage base to be inoculated.

2. Open the pouch and add the granulated culture directly to beverage base. The culture can be dissolved in a smaller volume first and added to the total volume right after, if required. The culture should be completely dissolved in the beverage base.

**Technical Data**

Fermentation Conditions: Wort (12° Plato), 30°C.
Inoculation: 1 pouch/10hL

Legislation

The product is intended for food use.

Food Safety

No guarantee of food safety is implied or inferred should this product be used in applications other than those stated above. Should you wish to use this product in another application, please contact your Chr. Hansen representative for assistance. Good Manufacturing Practise (GMP) is implemented in all plants manufacturing Chr. Hansen cultures. Chr. Hansen has made a risk assessment of microbiological, physical and chemical risks in our manufacturing and distribution plants for dairy, wine and meat cultures. Control points (CP’s) and Critical Control Points (CCP’s) are based on the risk assessment. A HACCP team as well as HACCP plans are established for each plant.
